Given an array of integers, where all elements but one occur twice, find the unique element.

## Example

a = [1, 2, 3, 4, 3, 2, 1]

The unique element is 4.

# **Function Description**

Complete the lonelyinteger function in the editor below.

lonelyinteger has the following parameter(s):

· int a[n]: an array of integers

#### Returns

· int: the element that occurs only once

## **Input Format**

The first line contains a single integer, n, the number of integers in the array.

The second line contains n space-separated integers that describe the values in a.

### Constraints

- $1 \le n < 100$
- It is guaranteed that n is an odd number and that there is one unique element.
- $0 \le a[i] \le 100$ , where  $0 \le i < n$ .
